

# DEGREE RING ROLLER RUBBER KIT

## INSTALLATION INSTRUCTIONS

1. Remove all eight degree shoulder bolts and rollers. The degree ring should be removed and cleaned at this time too.
2. Remove old rubbers with a small pick or screwdriver making sure to get all old rubber pieces removed.
3. Clean rollers with a suitable cleaner like Brake Clean or Carb spray.
4. Install new rubbers with a small screwdriver, making sure they are not turned inside-out, or twisted, in the groove.
5. Clean shoulder bolts and install a small amount of lube between bolt and roller.
6. Install degree wheel back in place and install the shoulder bolts and rollers.
7. Be careful to get the degree wheel in the roller groove and carefully tighten shoulder bolts.
8. Degree wheel should now rotate freely. If degree wheel rattles slightly, double up on a couple of rollers with spare rubbers.
